

PROCESS TECHNOLOGIST IN THE MILLING AND GRAIN INDUSTRY

Process technologists in the milling and grain industry manufacture grain products, feeds and special products, such as spice powders. In doing so, they check incoming orders and specify the individual work steps, for example the receipt of raw materials, cleaning and preparation for processing, the setting up of systems and machines, and the monitoring of the production process. They also perform laboratory tests, as well as visual and tactile inspections and odour checks of the ground products. Their responsibilities also include the storage and packaging of the products in compliance with hygiene regulations and occupational health and safety regulations. If necessary, they will take measures against pest infestation.

Training location:

Nordgetreide GmbH & Co. KG, Lübeck

Deutsche Tiernahrung Cremer GmbH & Co. KG, bundesweit
